Press Release

Medical Device Quality Cooperative Announced

Rapid Application Software Development Based on SharePoint

Cleveland, Ohio, March 16, 2010: Silico Corporation announced today, the formation of a Medical Device Quality Assurance Cooperative at The BioOhio Suppliers and Service Providers Expo in Columbus, Ohio. Silico is a Cleveland based business process management consulting and technology company, recently formed by John M. Cachat. "I have used this approach successfully in the past and I am confident that it will work again," stated Cachat.

The idea of the cooperative effort is just that, a cooperative approach to automating robust quality management process that leverages Microsoft SharePoint technology. "When 10 companies work together towards a common goal, the cost goes down, the risk goes down, and the quality of the output goes up. Cachat used a similar approach back in the 1990s when he coordinated almost 200 manufacturing companies to work together to develop quality assurance software; mainly in the automotive and aerospace markets.

Silico's technology runs on SharePoint and provides out-of-the-box Document Control and Forms-Based Business Process Management. It is built from the ground up for the Microsoft SharePoint environment and enables companies to implement and enforce their processes. The Silico solutions add value to the base SharePoint product and provide an efficient, reliable, and cost effective means to create and enforce virtually any type of role-based business process without software coding.

Silico will be hosting a webinar on Wednesday, March 31st at 2 PM EST to provide information on the Medical Device Quality Assurance Cooperative. You can register by
