Silico Announces Hosted Version of Quality Management Software

Better Technology, Lower Cost

Cleveland, Ohio, July 25, 2011—Silico Corporation, a leading provider of BPM consulting and software technology services, announced today the launch of a hosted version of its Quality Management Software (QMS). The hosted version of the [Silico QMS Instant Application Framework](#) allows the software to be used over the Internet for a rental fee, which greatly simplifies the startup and maintenance process. This also relieves users of the burden of maintaining a network, server, backups and other technical requirements. The only requirement is an Internet connection.

“The Silico QMS Instant Application Platform provides a robust technology that allows customers to modify web forms, create workflows, and generate reports without traditional programming,” stated [John M. Cachat](#), President and CEO of Silico. “In addition, the platform is not limited to just QMS and can be used for any business process. Any spreadsheet or Access database can be easily replaced with a flexible, secured, multi-user tool.”

The Silico QMS Instant Application Framework allows users to automate business and human workflow processes to create software solutions that meet their needs. Silico can help organizations create a new QMS solution, upgrade from an old client server QMS software, automate a manual process, customize an application to fill in the missing pieces of existing software and more.

The hosted version of the Silico QMS Instant Application Framework is available immediately. For more information, please contact sales@silicocorp.com or call (440) 333-9900.
